COLLEGE CODE : 9214

COLLEGE NAME :RVS School of Engineering and Technology

DEPARTMENT : Computer Science and Engineering

PROJECT DETAILS

NAME : Enforcing Mandatory Fields Using UI Policies and Migrating Changes with Update Sets

TEAM ID : SWTID-2026-3188

TEAM LEADER

NAME: CHRISTOPHER RAJA V

STUDENT NM ID: 4EB6215C3CBF519946C4EEA4F7542091

TEAM MEMBERS :

1.KIRAN A-4D47017808D9924BA3446D02DE3261ED

2.AROCKIA BERNAD A-1CA9EFA37D8CC39AB0C48D01F2938C3F

3.HARISH R-E579F72685B5E31839E46C74DA075226

UI policy

UI Policy is a configuration in Service Now used to change field properties on a form automatically depending on defined conditions.

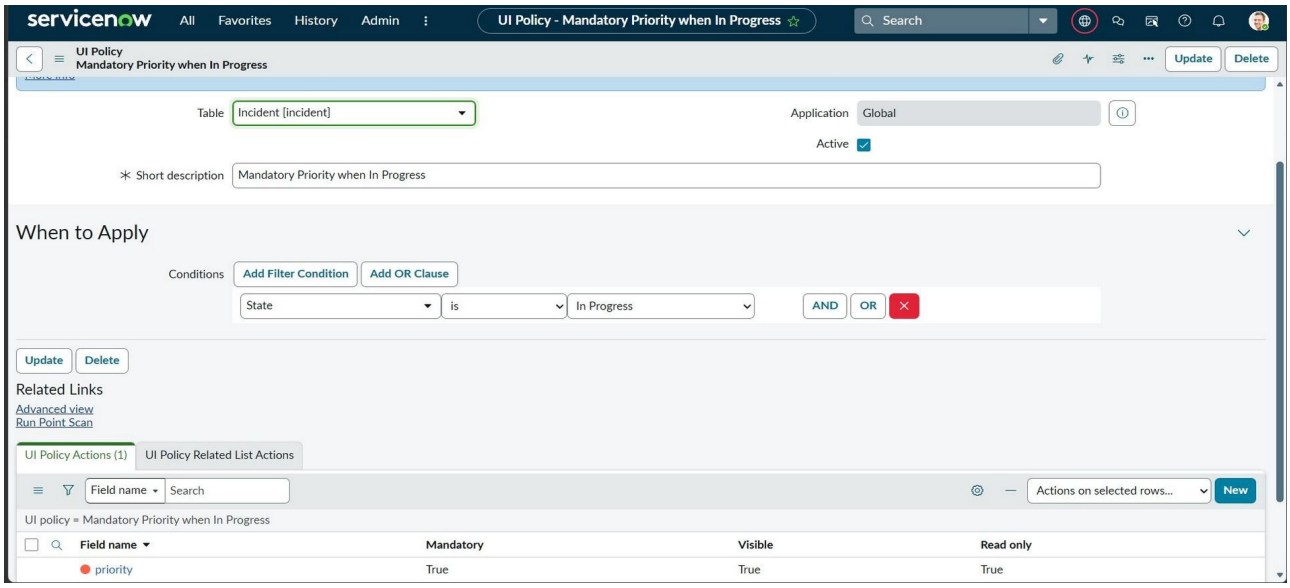
Create UI policy

1. Open service now.

2. Click on All >> search for ui policies

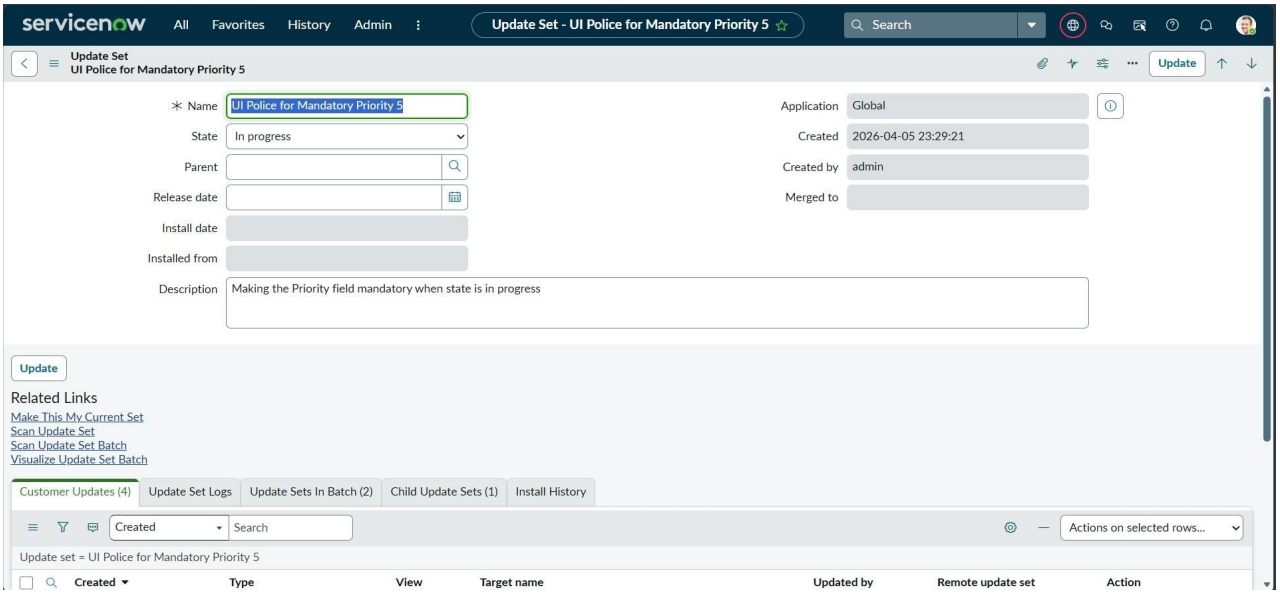
3. Navigate to System UI >> UI Policies

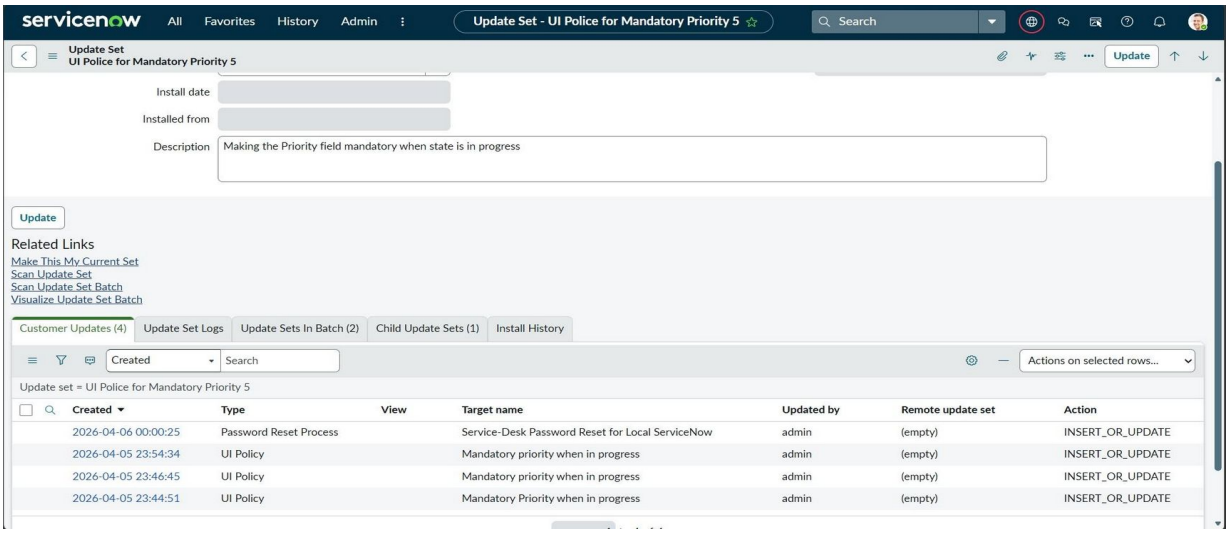
4. Click on new



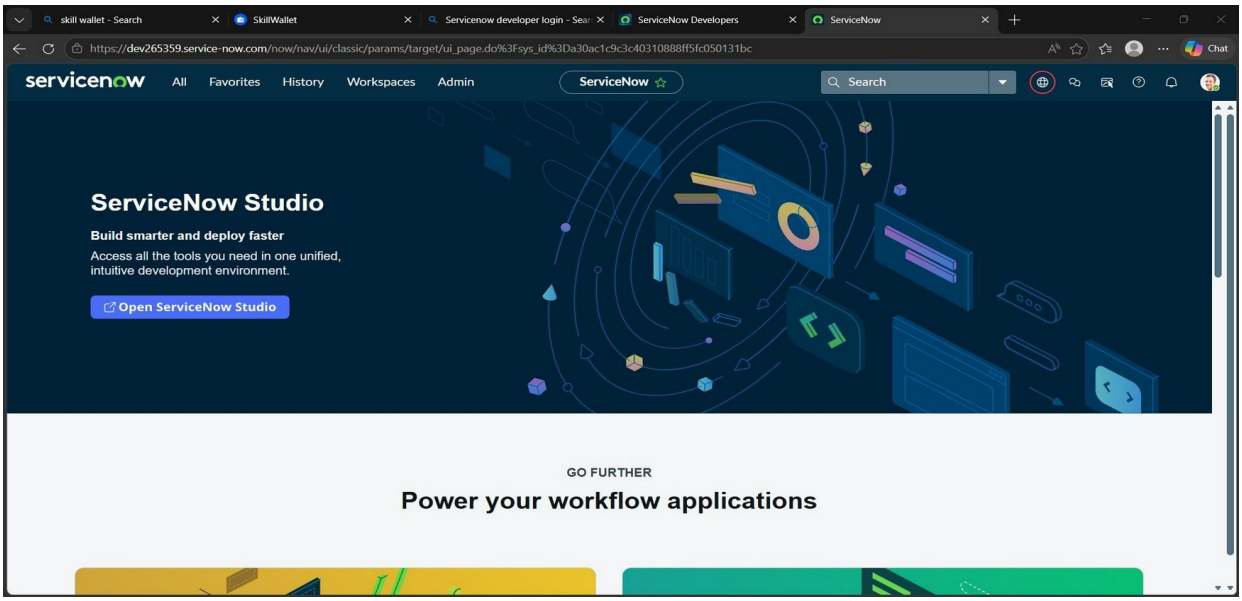
5. Fill the following details and Save

6. Scroll Down and add 'priority' Field on Ui policy Actions





7. Click on submit.



Update Sets

Update Sets are a feature used to move customizations and configurations (like UI Policies, Business Rules, forms, etc.) from one instance to another (e.g., Dev → Test → Production).

Why Update Sets are Used

To track development changes

To transfer changes safely between instances

To avoid redoing work manually

What Gets Captured

UI Policies

Client Scripts

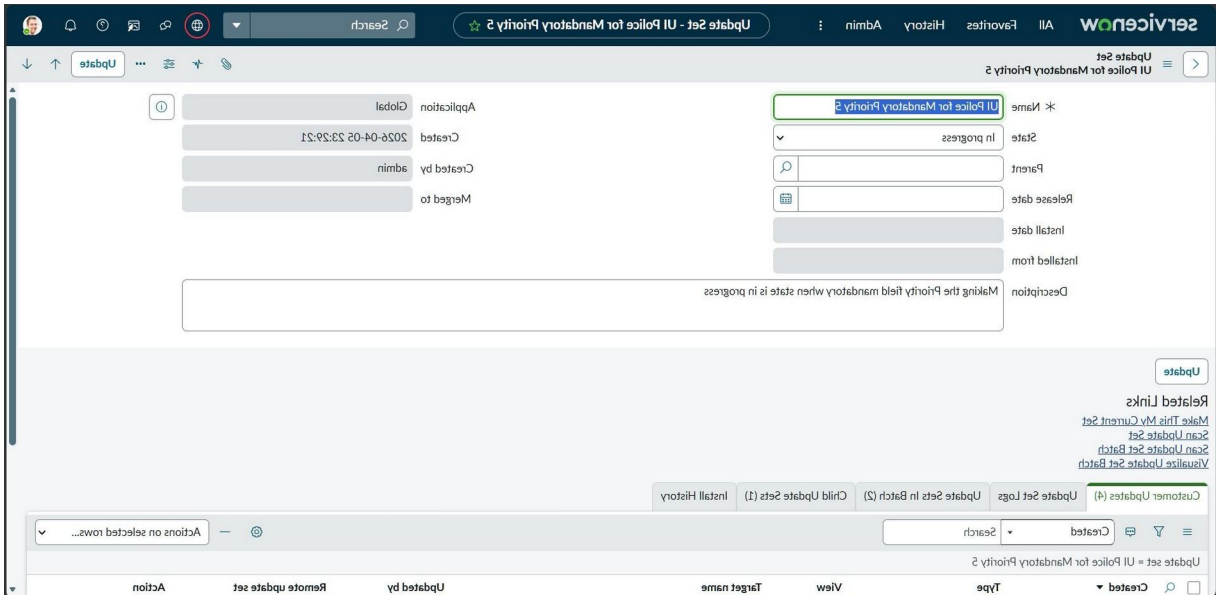
Business Rules

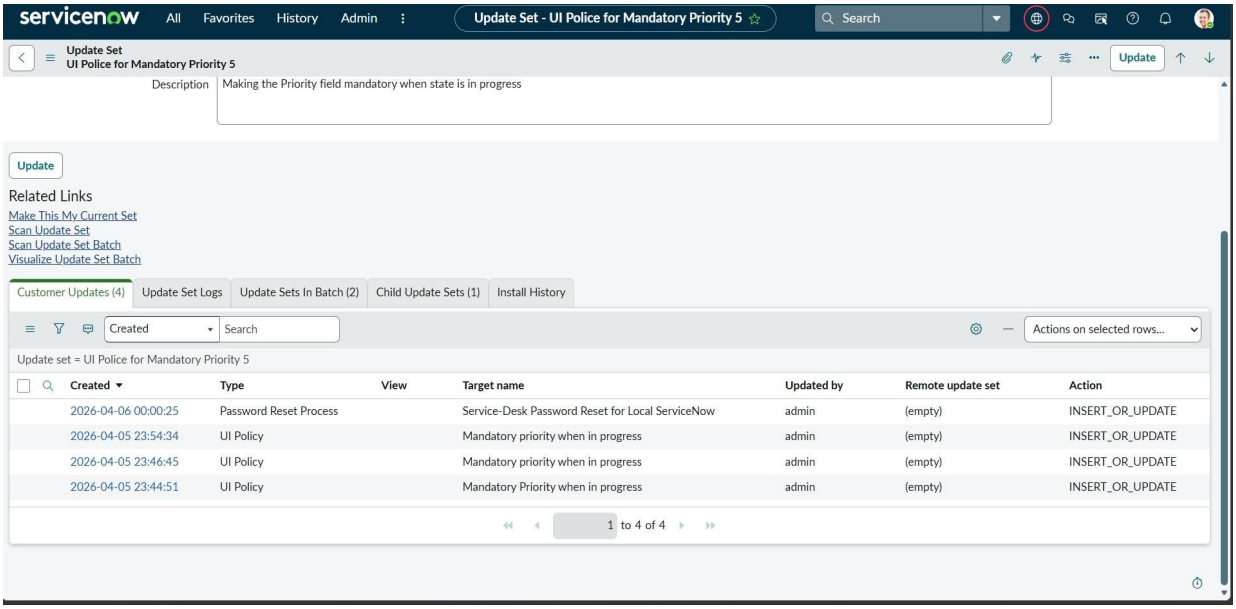
Tables & Fields

Forms & Views

Create Update Set

1. Open service now.
2. Click on All >> search for Update Sets
3. Select Local Update Sets
4. Click on new
5. Fill the details below and make current.





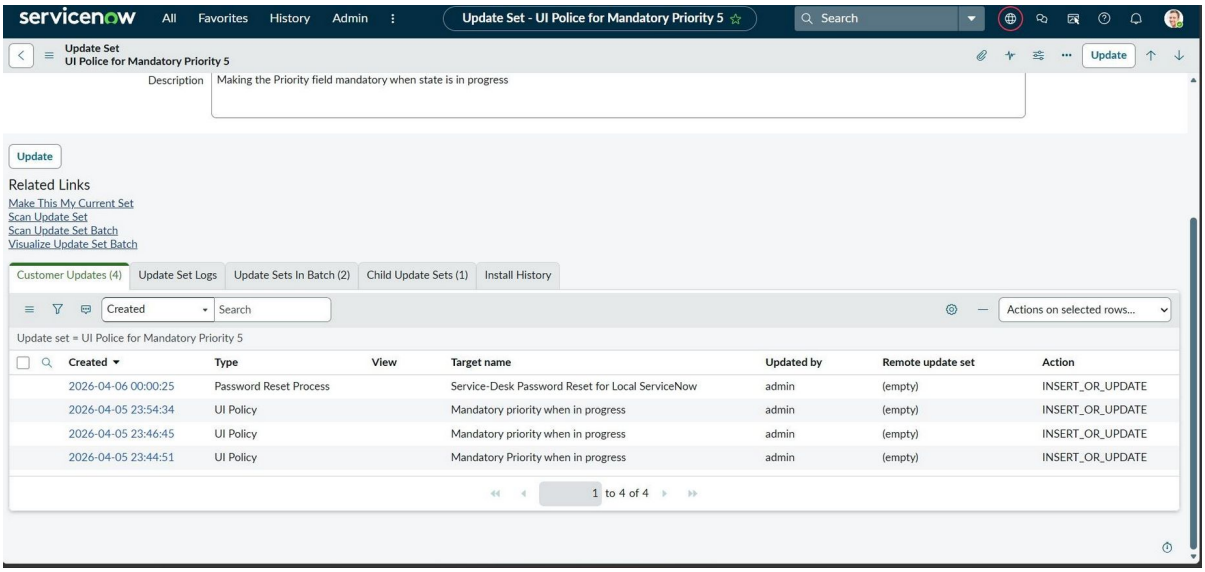
6. Click submit.

Check Update Set

Check Update Set = Confirm your changes are recorded in the correct update set before moving it

1. Navigate to the System Update Sets > Local Update Sets.

2. Open the 'Ui policy for mandatory priority' Update Set. 3. Verify that your UI Policy and UI Policy Action are listed.

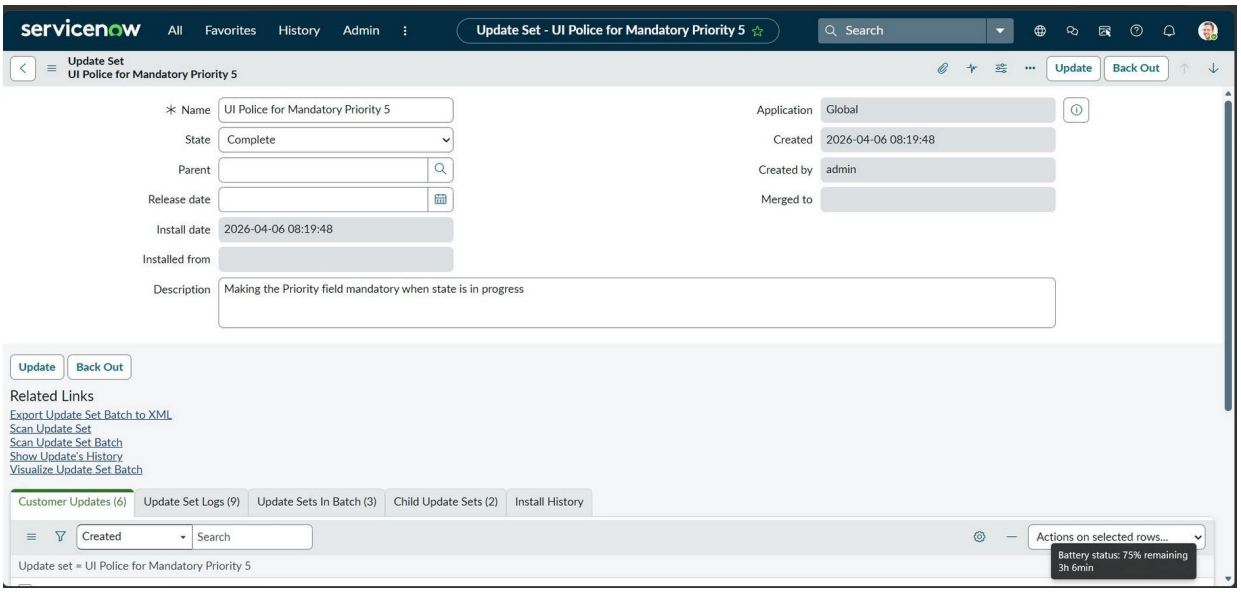


Export and Import the Update Set

This process is used to move your work (like UI Policies, scripts, etc.) from one instance to another (Dev → Test → Production).

1. Set State to Complete and Click Export to XML on the Update Set record.

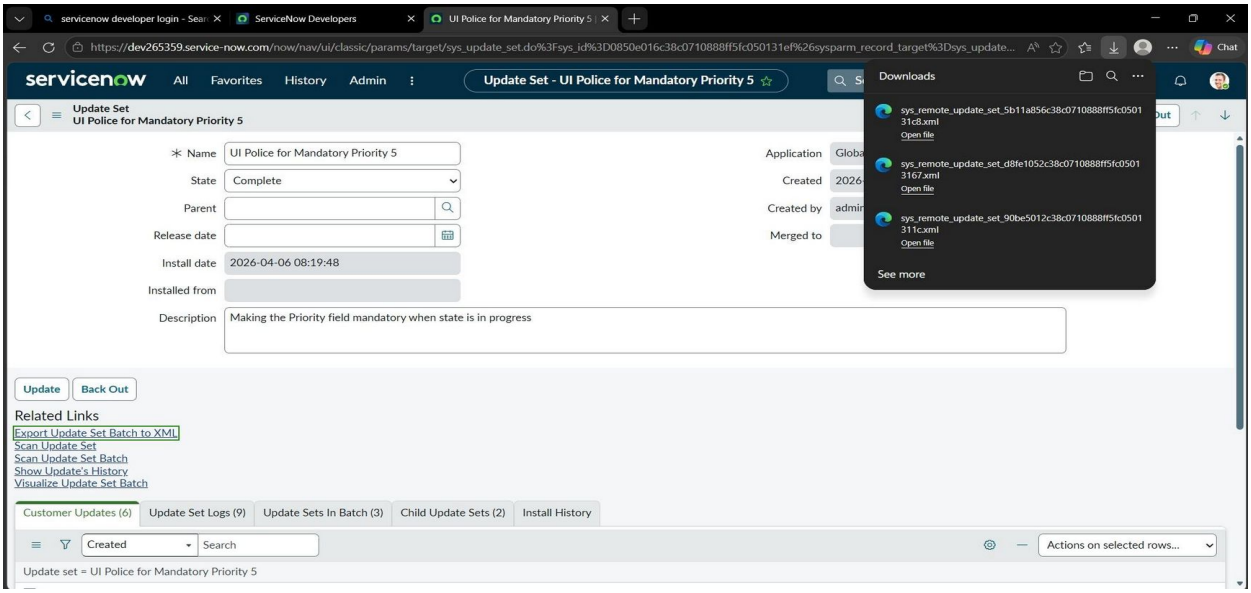
2. Download the XML file.



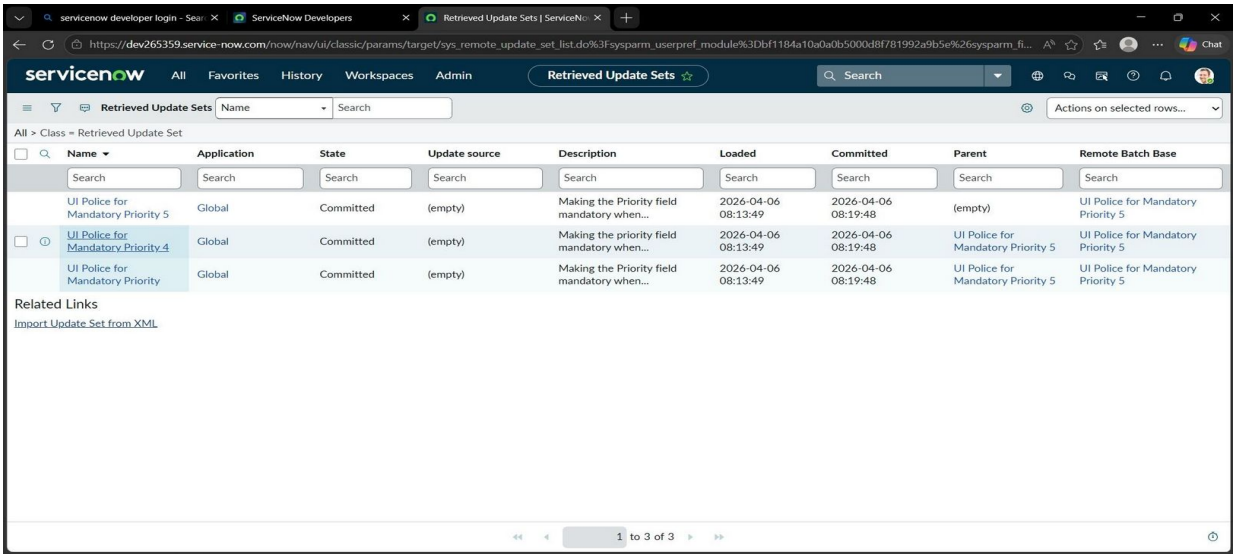
3. Now Open Another Instance to Export Update Set.

4. Go to System Update Sets >> Retrieved Update Sets.

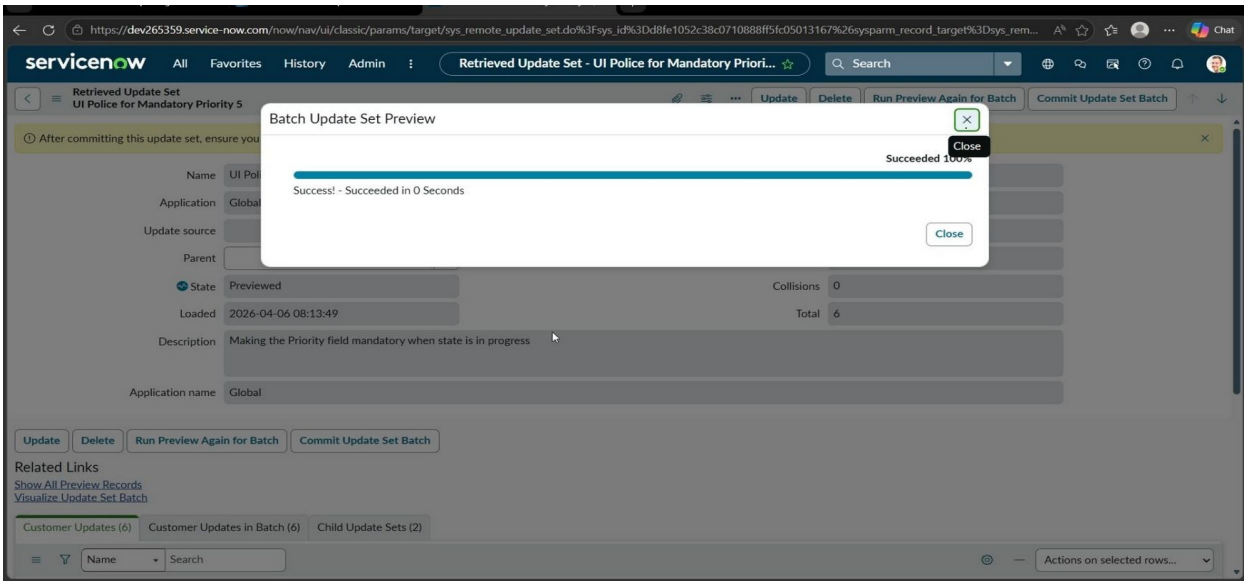
5. Click on the Import update set from XML and Select File and Upload



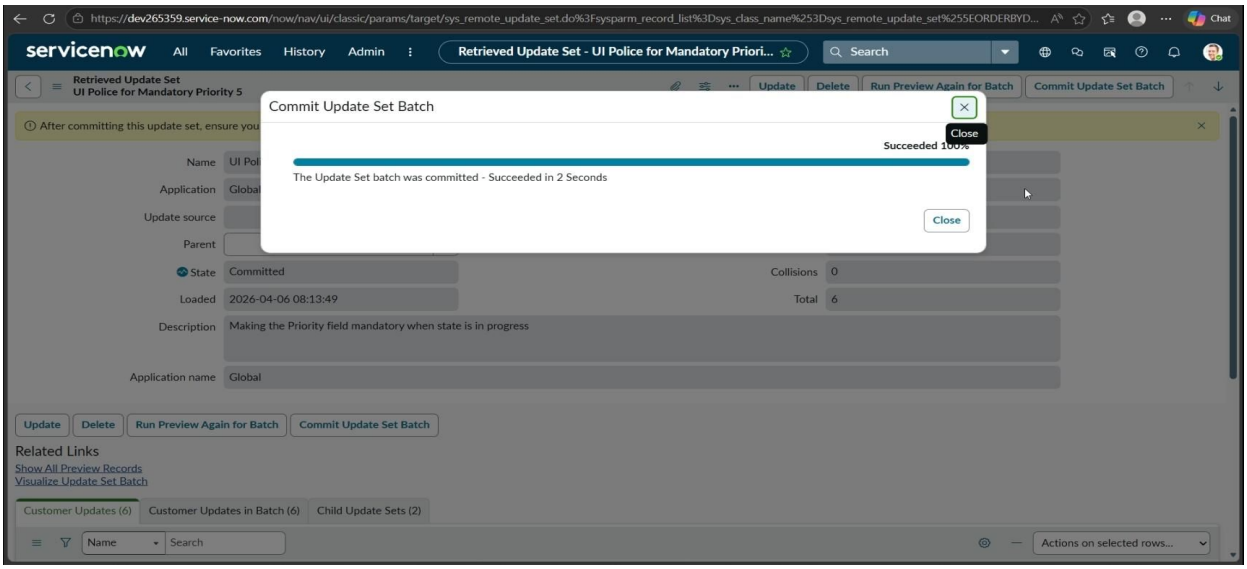
6. Open the update set that you have created in your instance here.



7. Preview the Update Set.



8. Commit the Update Set.



Result

Testing an Incident means creating and validating an incident record to ensure configurations (like UI Policies, workflows, or rules) are working correctly.

Purpose of Testing Incident

Verify UI Policy behavior

Check mandatory fields

Ensure form validations

Confirm business logic is working

What to Check During Testing

Field visibility

Mandatory enforcement

Read-only behavior

Error messages

Data saving correctly

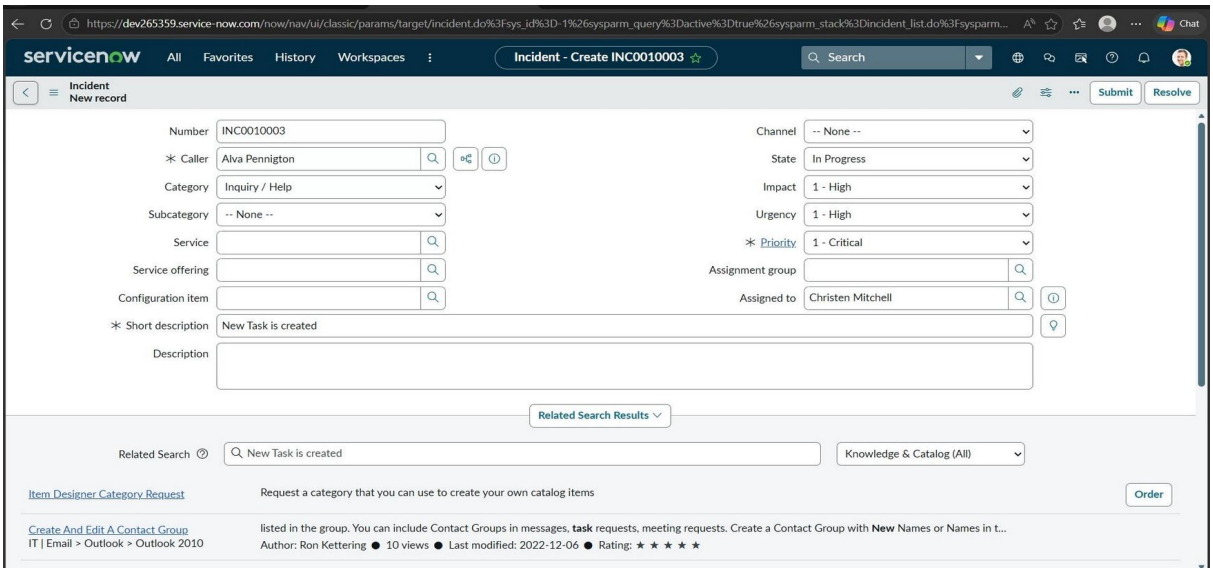
Testing Incident

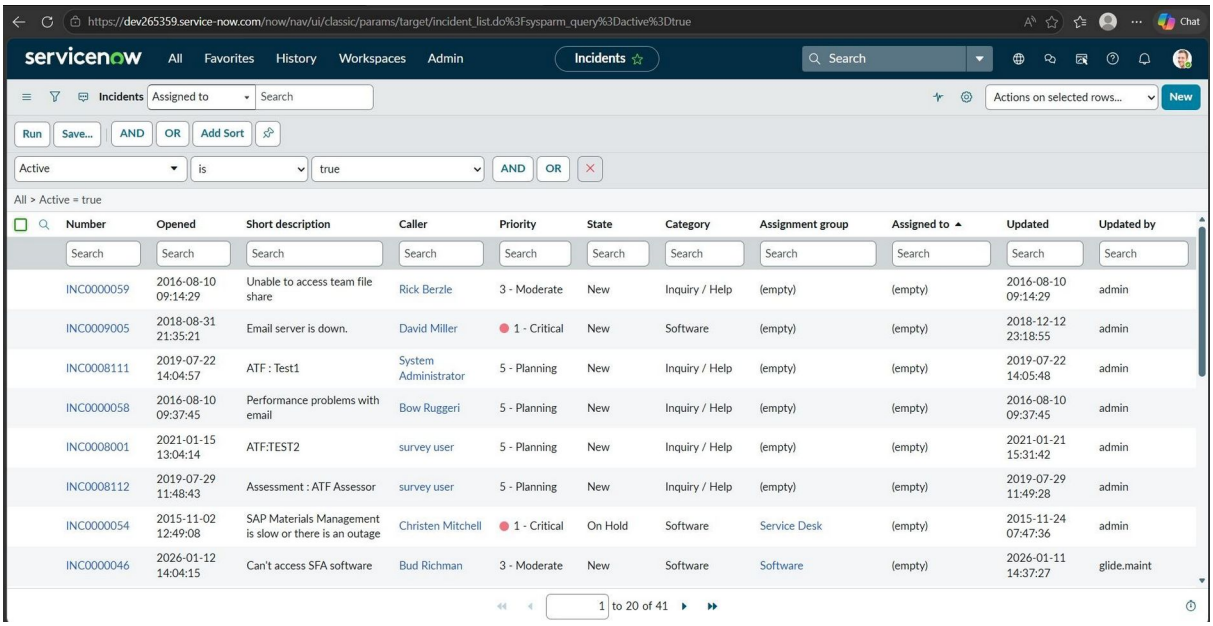
1.Go to the incident module.

2.Open an existing incident or create a new one.

3.Change the State is In-progress

4.The Priority field should now be mandatory





Conclusion

The project “Enforcing Mandatory Fields Using UI Policies and Migrating Changes with Update Sets” in Service Now demonstrates an effective way to improve data accuracy and system efficiency.

By using UI Policies, mandatory fields were enforced dynamically, ensuring that users enter all required information before submitting records. This reduces errors and maintains data consistency.

Through Update Sets, all configurations were successfully tracked and migrated between instances, enabling smooth and reliable deployment without manual effort.
